SOFT STONE  
COLORS

2024

CHANTA GROUP

WITOP DECOR®

SHANDONG WITOP DECOR MATERIALS CO., LTD.

## Soft Stone

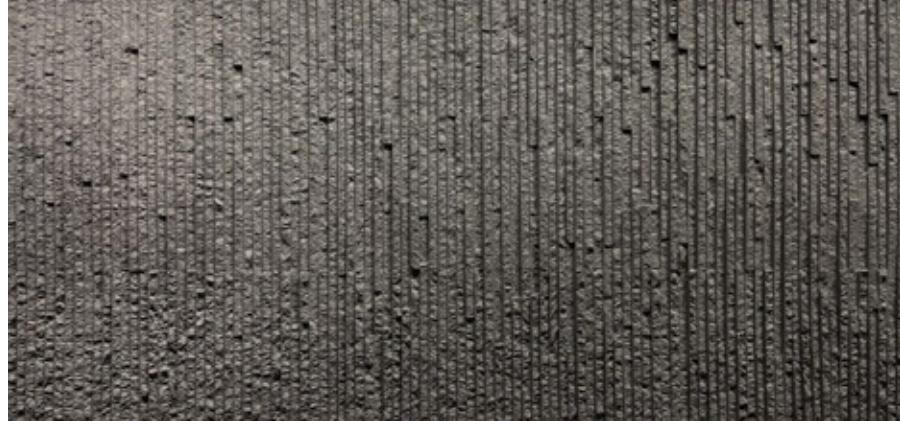

The raw materials are colored inorganic mineral powders such as ore soil, ore, ore powder, and a small amount of water-based polymer is added as an improvement.

Modified and reorganized molecular structure, low-temperature microwave molding, and finally form a light-weight decorative material with certain flexibility.

No pollution, it can completely replace traditional building materials with high energy consumption and low environmental protection such as ceramic tiles, paints, and marble.

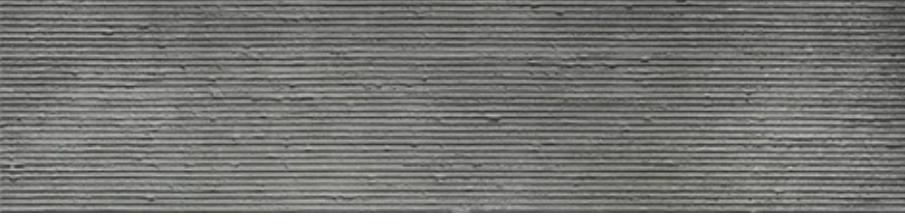

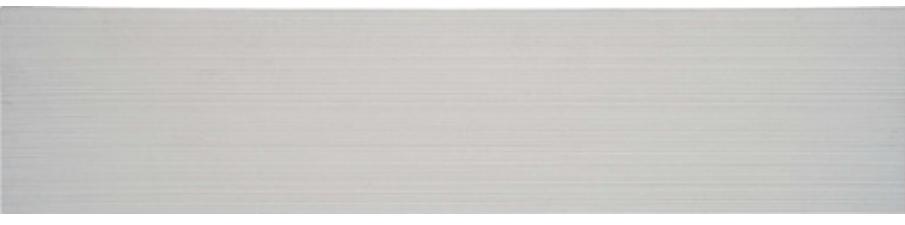

## Product Introduction

Imitation of decorative materials such as natural stone, travertine, rammed earth, and clear water pouring board. Simulate and restore it in all aspects from texture, color, mechanism, etc. Compared with the former, flexible concrete has the advantages of large volume, light weight, good flexibility, bendability, convenient construction (adhesive/tile adhesive bonding), and low cost. It can be used both indoors and outdoors.
